Summary

Aspiring full stack developer with foundational knowledge of Python, Java, JavaScript, HTML, CSS, and SQL. Familiar with object-oriented programming and Git/GitHub for version control. Interested in software development, computer vision, and building practical technology solutions.

Technical Skills

Languages: Java, Python, SQL, JavaScript, HTML, CSS
Frameworks: React (Basics), Node.js (Basics)
Cloud & Production: Google Cloud Platform (GCP), Git, GitHub Actions, CI/CD Pipelines, Code Documentation
Core Fundamentals: Data Structures and Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks

Internship

MindMatrix.io Feb 2026 – May 2026
Android App Development using Generative AI Intern *Bengaluru*

- Worked on Android application development using Kotlin and Jetpack Compose, following standard Android development workflows.
- Gained hands-on experience with Android Studio, Google Cloud Labs, and Google AI Studio to explore Generative AI capabilities in application development.
- Practiced UI/UX design, application prototyping, feature development, debugging, and iterative enhancements
- Gained project-based experience with Firebase integration, application testing, and standard Android development practices.

Projects

AI Smart Mirror | Python, Raspberry Pi 3B+, OpenCV, React, Node.js Oct 2022 – Apr 2023

- Built a multimodal embedded interface combining facial recognition, voice commands, and gesture-based controls on a Raspberry Pi 3B+
- Achieved 92 % facial recognition accuracy and integrated live weather and news feeds into a personalized dashboard.
- Implemented a dashboard with sub-second response latency and an ambient-light-adaptive display algorithm that reduced power consumption by 35%.

Deepfake Detection System | *Python, TensorFlow/Keras, OpenCV, Scikit-learn GitHub* June 2025 – Dec 2025

- Developed a deep learning-based application to classify uploaded videos as real or fake.
- Integrated MTCNN for face detection and Xception for extracting facial features from video frames.
- Used an SVM classifier to classify extracted features and majority voting to determine the final video prediction.
- Built a desktop GUI using Tkinter to support video uploads and display detection results

Price Vision AI | *Python, JavaScript, React.js, Web Scraping, API Integration* June 2025 – Dec 2025

- Developed an AI-powered product discovery system combining image-based and text-based search to identify and retrieve relevant products.
- Built a price comparison workflow to collect, organize, and compare product information across e-commerce platforms. esigned a web interface displaying product images, specifications, prices, and direct purchase links.

Education

Sai Vidya Institute of Technology CGPA - 8
Bachelor of Engineering (B.E.) – Computer Science and Engineering *Dec. 2023 – May 2026*

Government Polytechnic (GPT) CGPA - 7.9
Diploma – Computer Science – *Aug. 2020 – May 2023*
